subsequent adjustments made pursuant to the actual allocation of costs.

(b) Notwithstanding any other provision of this part, no interest liabilities will be incurred or calculated for indirect costs and administrative costs, provided the funding conventions described in paragraph (a) of this section are properly applied.

§ 205.19 How is interest calculated?

- (a) A State must calculate Federal interest liabilities and State interest liabilities for each Federal assistance program subject to this subpart A.
- (b) The interest rate for all interest liabilities for each Federal assistance program subject to this subpart A is the annualized rate equal to the average equivalent yields of 13-week Treasury Bills auctioned during a State's fiscal year. We provide this rate to each State.
- (c) A State must calculate and report interest liabilities on the basis of its fiscal year. A State must ensure that its interest calculations are auditable and retain a record of the calculations.
- (d) As set forth in §205.9, a Treasury-State agreement must include the method a State uses to calculate and document interest liabilities.
- (e) A State may use actual data, a clearance pattern, or statistical sampling to calculate interest. A clearance pattern used to calculate interest must meet the standards of §205.20. If a State uses statistical sampling to calculate interest, the State must sample transactions separately for each Federal assistance program subject to this subpart A. Each sample must be representative of the pool of transactions and be of sufficient size to accurately represent the flow of Federal funds under the Federal assistance program, including seasonal or other periodic variations.
- (f) For the first year in which a Federal assistance program is covered in a Treasury-State agreement, funds transfers that occur prior to the first day of the State's fiscal year must not be included in interest calculations and are not subject to the interest liability provisions of this part.

§ 205.20 What is a clearance pattern?

States use clearance patterns to project when funds are paid out, given a known dollar amount and a known date of disbursement. A State must ensure that clearance patterns meet the following standards:

- (a) A clearance pattern must be auditable.
- (b) A clearance pattern must accurately represent the flow of Federal funds under the Federal assistance programs to which it is applied.
- (c) A clearance pattern must include seasonal or other periodic variations in clearance activity.
- (d) A clearance pattern must be based on at least three consecutive months of disbursement data, unless additional data is required to accurately represent the flow of Federal funds.
- (e) If a State uses statistical sampling to develop a clearance pattern, the sample size must be sufficient to ensure a 96 percent confidence interval no more than plus or minus 0.25 weighted days above or below the estimated mean.
- (f) A clearance pattern must extend, at a minimum, until 99 percent of the dollars in a disbursement have been paid out for Federal assistance program purposes.

 (g) We and a State may agree to
- (g) We and a State may agree to other procedures, such as estimates to project when funds are paid out when the dollar amount and/or the timing of disbursements are not known.

§ 205.21 When may clearance patterns be used?

- (a) A State may develop a clearance pattern for:
- (1) An individual Federal assistance program;
- (2) A logical group of Federal assistance programs that have the same disbursement method and type of payee;
 - (3) A bank account;
- (4) A specific type of payment, such as payroll or vendor payments; or
- (5) Anything that is agreed upon by us and a State. If a clearance pattern is used for multiple Federal assistance programs, a State must apply the clearance pattern separately to each Federal assistance program when scheduling funds transfers or calculating interest.
